

RVALERT

SYSTEM

**MOTION SENSING
DECELERATION WARNING LAMP**

COLLISION AVOIDANCE SYSTEM

**CAPTURES the ATTENTION of
Today's Distracted Drivers**

**PROTECTS your Family, RV
and your Vacation!**

Installing a Deceleration Warning Lamp on your RV or Travel Trailer is a Wise Decision!

The last thing you want to do on your vacation trip is spend time scheduling vehicle repairs due to damage done by a distracted driver.

In heavy traffic, slowing vehicles ahead can cause sudden or severe braking. Yet the driver behind your RV cannot see ahead of you. Your tail lamps don't indicate how severely you are braking. It is important to send a powerful message to avoid being hit.

On today's roads, chances are, the person driving behind you has a smart phone and they are using it.

VTRCORP has over a decade of experience manufacturing deceleration warning lamps proven highly effective to reduce rear-end collisions caused by distracted drivers

A highly effective Collision Avoidance System

Advanced motion sensing technology monitors vehicle velocity. They are programmed to execute a flashing pattern specifically proven to capture attention during deceleration events.
